Dispatch [redacted]

File: Air-Fed Inc.

1. The Air-Fed Incinerator designated for installation

[redacted] was shipped 15 November via [redacted]. The ETA [redacted]

was 4 December 1960.

2. A short piece of sixteen inch diameter, 16 gauge, 310 Stainless Steel stack which has been designed for use with the incinerator is included within the shipment. However it will be necessary to have additional 16 gauge carbon steel stack fabricated locally by a sheet metal worker. This will have to be fabricated after an examination of the area where the unit is to be installed by the headquarters KURIOT representative. Two hundred and twenty volt, three phase current should be brought to the immediate area.

3. It would be advisable for you to take steps immediately toward accomplishing the following:

- A. Establish contact with a sheet metal fabricator who can fabricate stack extensions as seen necessary by the KURIOT representative who will perform the installation.
- B. Make certain a 220 Volt, 3 phase electric line comes to the immediate area where the unit is to be installed.
- C. Advise headquarters when you prefer the KURIOT representative to arrive [redacted] to perform the installation. Physical help will be necessary from [redacted] during the installation

for the assembly operation.
